

Listing of the Claims:

The Listing of Claims below will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently Amended). A display package for generally ring-shaped ponytail holders comprising:

a. a fold-over card formed from a single elongated strip folded at the bottom to define front and rear panels joined by a neck at the bottom said panels together defining a flat first plane, each of said panels having near its top edge a through hole, said holes becoming aligned when said panels are folded to overlie each other,

b. ~~a wire formed as a closed~~ single support loop which defines a second plane, said loop having top and bottom parts, the top part lying in said neck, said bottom part situated below said neck, said second plane of said support loop being generally coplanar with said first plane of said panels, and

c. a plurality of ring-shaped ponytail holders, said ~~wire~~ support loop extending through the bores of said ponytail holders such that they hang below said fold-over card, each ring-shaped ponytail holder defining a third plane situated generally perpendicular to said first plane of said panels.

2. (Currently Amended). A display package according to claim 1, wherein, when said package is suspended, said panels when folded to overlie each other are generally parallel and define a said first plane which is vertical. ~~plane, with said ponytail holders each defining a plane generally perpendicular to said first vertical plane~~

3. (Currently Amended). A display package according to claim 1, wherein said ponytail holders hang with their planes generally perpendicular to the plane of said ~~wire~~ support loop.

4. (Original). A display package according to claim 1 wherein said ponytail

holders are positioned below said folded panels and generally centered therewith.

5. (Currently Amended). A display package according to claim 1 wherein said ~~apertures~~ through holes through said front and rear panels are situated midway of the length of said panels from left to right.

6. (Cancelled). ~~A display package according to claim 1 wherein said wire comprises a plastic wire having bumps situated along its length and a latch through which said bumps are extendable in one direction and not removable in the other direction.~~

7. (Currently Amended). A display package according to claim 1 wherein said ~~first~~ front and rear panels have generally the same length and height.

8. (Original). A display package according to claim 1 wherein said strip comprises plastic sheet.

9. (Original). A display package according to claim 1 wherein said strip comprises cardboard.

10. (Original). A display package according to claim 1 wherein said panels lie generally flat against each other.

11. (Currently Amended). A display package for generally ring-shaped ponytail holders comprising:

a. a fold-over card formed from a single elongated strip folded at the bottom to define front and rear panels joined by a neck at the bottom, each of said panels having near its top edge a through hole, said holes becoming aligned when said panels are folded to overlies each other,

b. a wire-like element formed as a closed loop which defines a plane, said loop having top and bottom parts, the top part lying in said neck, said bottom part situated below said neck, said plane of said loop being generally coplanar with said plane of said panels, and

c. a plurality of ring-shaped ponytail holders, said wire-like element extending through the bores of said ponytail holders such that they hang below said fold-over card, each ring-shaped ponytail holder defining a plane situated generally perpendicular to said panels.

12. (New) A display package for generally ring-shaped ponytail holders comprising:

a. a fold-over card formed from a single elongated strip folded at the bottom to define front and rear panels joined by a neck at the bottom said panels together defining a flat first plane, each of said panels having near its top edge a through hole, said holes becoming aligned when said panels are folded to overlie each other,

b. a support loop which defines a second plane, said loop having top and bottom parts, the top part lying in said neck, said bottom part situated below said neck, said second plane of said support loop being generally coplanar with said first plane of said panels, and

c. a plurality of ring-shaped ponytail holders, said support loop extending through the bores of said ponytail holders such that they hang below said fold-over card, each ring-shaped ponytail holder defining a third plane situated not coplanar with said first plane of said panels.
